The Fund's Board of Trustees may terminate the contractual arrangement at any time if it determines that it is in the best interest of the Fund and its shareholders.

EXAMPLE

The following Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although

your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$61	\$334	\$628	\$1,464

PORTFOLIO TURNOVER. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual portfolio operating expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 100.72% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

In seeking its investment objective, the Fund will invest, under normal circumstances, at least 80% of its net assets in a broadly diversified portfolio of equity securities in large capitalization U.S. companies, including foreign issuers that are traded in the U.S. Large capitalization companies generally are considered to be those whose market capitalization is, at the time the Fund makes an investment, within the range of the market capitalization of the companies in the S&P 500[®] Index. As of June 30, 2011, the market capitalization of the companies in the S&P 500 Index was between \$1.41 billion and \$400.88 billion. The size of companies in the S&P 500 Index changes with market conditions. In addition, changes to the composition of the S&P 500 Index can change the market capitalization range of companies in that index. The Fund is not limited to the stocks included in the S&P 500 Index and may invest in other stocks that meet the Investment Adviser's criteria discussed below.

The Fund's investment strategy attempts to create a portfolio with similar risk, style, capitalization and industry characteristics as the S&P 500 Index with the potential to provide excess returns by allowing the Fund to hold a portion, but not all of the securities in the S&P 500 Index. In managing the Fund, the investment management team attempts to achieve the Fund's objective by overweighting those stocks that it believes will outperform the S&P 500 Index and underweighting (or excluding entirely) those stocks that it

believes will underperform the S&P 500 Index. The Fund seeks to accomplish this goal by employing a strategy that uses statistics and advanced econometric methods to determine which fundamental and quantifiable stock or firm characteristics (such as relative valuation, price momentum and earnings quality) are predictive of future stock performance. The characteristics are combined to create a proprietary multifactor quantitative stock selection model which generates stock specific forecasts that are used along with risk controls to determine security weightings. The investment management team's approach, based primarily on applying quantitative methods to fundamental research (e.g., selecting stocks based on economic, financial, and market analysis), is applied within a risk constrained environment that is intended to increase return and result in a portfolio having characteristics similar to the S&P 500 Index. The team will normally sell a security that it believes is no longer attractive based upon the evaluation criteria described above.

The investment management team may engage in active trading, and will not consider portfolio turnover a limiting factor in making decisions for the Fund.

Standard & Poor's® Rating Service does not endorse any of the securities in the S&P 500 Index. It is not a sponsor of the Enhanced Large Cap Fund and is not affiliated with the Fund in any way.

PRINCIPAL RISKS

MARKET RISK is the risk that the value of equity securities owned by the Fund may decline, at times sharply and unpredictably, because of economic changes or other events that affect individual issuers or large portions of the market. It includes the risk that a particular style of investing, such as growth or value, may underperform the market generally.

MANAGEMENT RISK is the risk that a strategy used by the investment management team may fail to produce the intended results.

PORTFOLIO TURNOVER RISK is the risk that high portfolio turnover is likely to lead to increased Fund expenses that may result in lower investment returns. High portfolio turnover also is likely to result in higher short-term capital gains taxable to shareholders. For the last fiscal year, the annual portfolio turnover rate of the Fund exceeded 100%.

As with any mutual fund, it is possible to lose money on an investment in the Fund. An investment in the Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation, any other government agency, or The Northern Trust Company, its affiliates, subsidiaries or any other bank.

FUND PERFORMANCE

The bar chart and table that follow provide an indication of the risks of investing in the Fund by showing (A) changes in the

performance of the Fund from year to year, and (B) how the average annual total returns of the Fund compare to those of a broad-based securities market index.

The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future.

Updated performance information for the Fund is available and may be obtained on the Fund's Web site at www.northernfunds.com or by calling 800-595-9111.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

In calculating the federal income taxes due on redemptions, capital gains taxes resulting from redemptions are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemptions are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Fund Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.
